MARBLEMITE®

CULTURED MARBLE CALCIUM CARBONATE

PRODUCT DATA SHEET

MARBLEMITE is THE superior quality dry ground natural white marble containing a controlled distribution of medium and coarse particles. The superior performance of MARBLEMITE is derived from the combination of sieve and sub-sieve particles in controlled proportions. In addition, special precautions are taken to ensure an absolute minimal number of black specks are encountered. MARBLEMITE is the preferred choice of those manufacturing cultured marble of the finest quality and translucency.

TYPICAL VALUES:

Source	(M) Sylacauga, AL
Brightness (Hunter Y)	92
% CaCCb	' "' 96
% Acid Insolubles2" "
:%SiO ₂ 0.3.....
% Moisture 6ls
% Plus 50 mesh3
% Plus 200 mesh'
Hardness (Mohs)	50
Index of Refraction 3
Specific Gravity L6.....
Solid Density (lbs/gal) 2,7.....
Bulk Density: Loose (lbs/ft ³) 22.7
Bulk Density: Packed (lbs/ft ³) 85.....

110

APPLICATIONS:

MARBLEMITE was specifically developed for high whiteness and translucency in cultured marble applications. MARBLEMITE is a one-bag additive specifically designed to eliminate the need for blending minerals to minimize resin use.
